WHY SHOULD AN ENTERPRISE UPGRADE ITS SAGE X3 VERSION TO V12?

The new features of **Sage X3 V12** help an enterprise's operations team to use their ERP systems seamlessly. This advantage brings versatility to enterprises enabling technology enhancements and powering them with a faster pace to complete their transactions.

One of the main strategic advantage of **Sage X3 V12** compared with the earlier versions is-

- The capability **Sage X3 V12** provides for the organization to Adapt and Scale easily without getting into too many complications.

Let's start with the changes in the **User Interface-**

Aesthetically, the **V12** interface is smoother, faster and responsive compared to the earlier versions. While these changes seem just cosmetic, it makes life simpler to the user by allowing them to find tools and menu items, both on the mobile desktop versions.

The navigations have been simplified. Now you can access your most frequent accessed menu items by bookmarking them or do a quick search of a menu item using the search feature.

WHY SHOULD AN ENTERPRISE UPGRADE ITS SYSTEMS TO V12?

User Experience is smooth now

While an enhanced V12 user interface offers a superior user experience, the core functional features still take an upper hand adding exceptional value over the existing versions.

Improved Distribution Operations

The introduction of License Plate Numbers is considered to be the most value-adding feature for Distribution companies as this saves a lot of time in tracking. With V12, the SKU and the containers can be easily tracked by enabling tracking throughout the distribution process and getting the exact insight on the product across its lifecycle.

Greater Compliance Requirements

The enhanced compliance features embedded in the V12 version, makes it easy for any enterprise to scale and adapt to new geographies without getting into too many complications (for instance- the implementation of VAT in the Middle East or GDPR in the UK).

Improved Planning and Production

A new feature called Production Scheduler in the V12 version helps enterprises to define their interactive planning capabilities and capacity scheduling algorithms. This enables the production management team to adapt to the dynamic situations that may arise in the production life cycle. If any aspect of the product life cycle is slightly inefficient and affects the entire production, then enterprises can quickly adapt and align to changing their planning strategy with the new criterion.

Round the clock Access: Mobile Interface

V12 version is accessible on any browser (read that as all major browsers in use) and offers accessibility on mobiles thereby allowing users to access their ERP solutions anywhere. The other salient feature is the addition of data integration API framework that enables enterprises to connect with the ecosystem products with added ease.

In a crux, upgrading to V12 is an important step your enterprise can take to ensure your Sage product remains secure and compatible across geographies and business functionalities.

To know more how to upgrade to V12, reach out to us at info@germinit.com
